Intercollegiate Specialty Fellowship Examination in Restorative Dentistry

Part B - Clinical

The information below will be provided to candidates during assimilation.

Scenario

5 minutes assimilation/15 minutes examination

Please refer to the clinical and radiographic images for this case

History:

A 61-year-old patient attends a new patient clinic for restorative rehabilitation planning.

Presenting complaint:

Main concern is increasing difficulty in terms of chewing food. Patient would also like, if possible, to improve the aesthetics; but at present function is the bigger issue.

History of presenting complaint

Ongoing issues of tooth wear and difficulty eating. Also had various attempts at replacing the maxillary left central incisor but none have been effective long-term.

Dental history:

Intermittent dental attender. Sporadic brushing with no interdental cleaning performed.

Medical history:

Past smoker, stopped 20 years ago. Original habit 10-15 cigarette a day for about 20 years. Occasional acid reflux, but no active treatment.

Social history:

Works as a farmer in a busy dairy farm.

Clinical examination:

Extra oral

Loss of lower face height evident.

Intra oral:

Oral hygiene fair.

Some plaque deposits at gingival margin but no subgingival calculus deposits detectable.

Some restorations in disrepair.

BPE:

2	1	2
-	2	2

The questions below will not be available to candidates during assimilation, but will be asked by the examiners during the viva.

Scenario

5 minutes assimilation/15 minutes examination

1. What further investigations might you consider and why?
2. Describe what you see in the Radiographic report.
3. What diagnoses would you assign?
4. Outline your approach to management for this patient's issue. Consider all options with a focus on your preferred plan.
