Diploma of Membership of the Faculty of Dental Surgery (MFDS)

Changes to MFDS Part 2 results’ calculation

Following external expert advice, the MFDS Part 2 has moved towards calculating for each candidate a single percentage mark on their overall performance in the exam. The calculation of the mark adds together all four domain scores on all ten stations, and the pass mark is set by the borderline regression method.

The borderline regression method of calculating a single candidate percentage mark will come into the effect from May 2013 diet.
